DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3-10 & 12-17 are rejected under 35 U.S.C. 103(a) as being obvious over Taguchi (# US 7211133).

The applied reference has a common Assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Taguchi discloses an ink jet recording recoding method ejecting ink composition on the recording medium, wherein recording medium is paper, coated paper, or textile (column: 114, line: 20-60). The ink composition comprises a dis-azo compound (see Abstract) and it has oxidation potential more than 0.8 V (vs SCE) (column: 5, line: 1-6), which has a general formula as shown below (see Abstract; column: 3, line: 30-65; column: 5, line: 15-60; column: 9, line: 5-65):

A, B and C each independently represents an aromatic group or a heterocyclic group which may be substituted.

wherein B_1 and B_2 each represents a nitrogen atom, $=CR_1-$ or $-CR_2=$, and when either one of B_1 and B_2 represents a nitrogen atom, the other represents $=CR_1-$ or $-CR_2=$,

G , R_1 and R_2 each independently represents a hydrogen atom, a halogen atom, an aliphatic group, an aromatic group, a heterocyclic group, a cyano group, a carboxyl group, a carbamoyl group, an alkoxycarbonyl group, an aryloxy-carbonyl group, a heterocyclic oxycarbonyl group, an acyl group, a hydroxy group, an alkoxy group, an aryloxy group, a heterocyclic oxy group, a silyloxy group, an acyloxy group, a carbamoyloxy group, an alkoxycarbonyloxy group, an aryloxy-carbonyloxy group, an amino group (including an aminino group and a heterocyclic amino group), an acylamino group, a ureido group, a sulfamoylamino group, an alkoxycarbonylamino group, an aryloxy-carbonylamino group, an alkylsulfonylamino group, an arylsulfonylamino group, a heterocyclic sulfonylamino group, a nitro group, an alkylthio group, an arylthio group, a heterocyclic thio group, an alkylsulfonyl group, an arylsulfonyl group, a heterocyclic sulfonyl group, an alkylsulfinyl group, an arylsulfinyl group, a heterocyclic sulfinyl group, a sulfamoyl group or a sulfo group, and each group may be further substituted,

R_3 and R_6 each independently represents a hydrogen atom, an aliphatic group, an aromatic group, a heterocyclic group, an acyl group, an alkoxycarbonyl group, an aryloxy-carbonyl group, a carbamoyl group, an alkylsulfonyl group, an arylsulfonyl group or a sulfamoyl group, and each group may further have a substituent, provided that R_3 and R_6 are not a hydrogen atom at the same time, and

R_1 and R_5 , or R_5 and R_6 may combine to form a 5- or 6-membered ring.

Furthermore, the azo dye represented by formula (6) is preferably a dye represented by the following formula (7):

Taguchi differs from the claim of the present invention is that the two or more substituents having a pKa value in water of -10 to 5.

However, Taguchi teaches the same coloring compound as applicant's claimed invention, therefore it obvious that it has same property as applicant claimed. Therefore Taguchi obviously discloses the pKa value in water of -10 to 5.
